Doctor Vinay Bhide, DDS, M. Sc.
(Perio), FRCD(C) – Thornhill, Ontario

Dr. Vinay Bhide is a board-certified periodontist specializing in surgical periodontal and dental implant therapy, with a focus on esthetic and reconstructive periodontics. He completed his dental and specialty training at the University of Toronto and is recognized as an Examiner and Fellow of the Royal College of Dentists of Canada, as well as a Diplomate of the American Board of Periodontology.

In addition to his private practice, Dr. Bhide serves as a clinical instructor in the Department of Periodontics at the University of Toronto, where he teaches periodontics at both undergraduate and post-graduate levels. He also holds the position of Adjunct Assistant Professor in the Department of Periodontics at UPenn and serves as the head of the Division of Periodontics at Sinai Health Toronto.

UPDATE ON PERI-IMPLANTITIS – WHAT I WISH I KNEW 10 YEARS AGO!

As predictable and successful as dental implant therapy is for replacing lost teeth, the incidence of biologic complications such as peri-implantitis continues to increase at an alarming rate.

Indeed, clinicians are faced with the daily challenges not only of how to treat peri-implantitis but also what can be done to prevent it. However, with ongoing research and clinical efforts, our knowledge and understanding of this insidious condition also continues to grow.

This evidence-based presentation will review key concepts on the diagnosis, etiology, treatment, and prevention of peri-implantitis. Emphasis will be placed on what we've learned over the past decade and how this knowledge can be implemented in our daily practice immediately to enhance clinical outcomes for our patients.

Learning Objectives:

1. Review the current diagnostic criteria for peri-implant diseases
2. Learn about various etiologic factors which increase the risk of developing peri-implantitis
3. Discuss evidence-based strategies for the prevention of peri-implantitis
4. Learn about the classification of peri-implant bony defects
5. Review indications and techniques for treating peri-implantitis from non-surgical to surgical therapies
